

# SKODA Contracting

## UAV Pipeline Monitoring

Skoda Contracting now has the technology to monitor pipelines, right of ways, construction sites, and control stations using unmanned aerial vehicles - multicopter and fixed wing aircraft.

### Visual Inspection

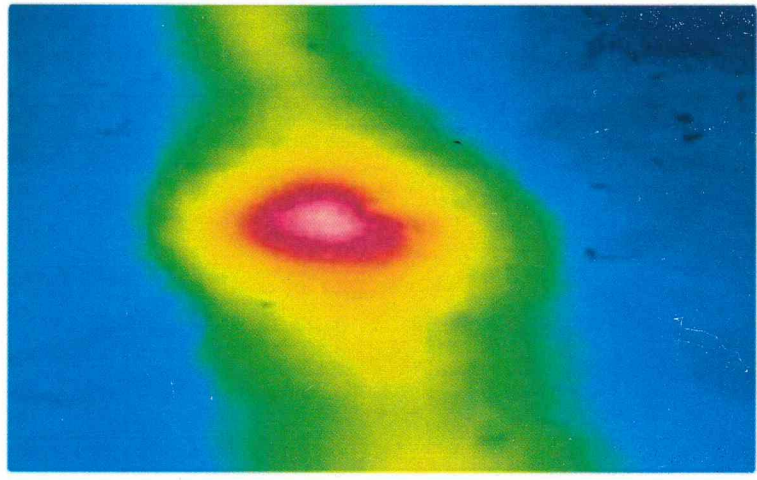

Aerial Inspections of right of ways to determine passable condition for emergency vehicles, general maintenance, and arboreal hazards. Real time monitoring and flight logs for industry professionals, compliance, and maintenance contractors.

### Leak Detection

Full motion video combined with GPS data that is geographically immersive to detect leaks using thermal imaging directly from the source or by affected vegetation.

### Visual Mapping

3d Mapping of gas right of ways and control stations for inspections and training purposes. 3d models are fully interactive.

Thermal Technology to Detect Leaks

## Unprecedented Accuracy

Obstructions are noted with exact latitude and longitude. All data is uploaded and stored for viewing in real-time.
